volleyball, watching F1

📁 Employment History

Senior Software Engineer/Tech Lead at Pento ApS, Copenhagen & London

February 2018 — Present

Joined as engineer #2 and saw company growing to ~100 people. Helped building the original product using Golang on the backend and React/Typescript on the frontend, working as a full stack developer. Built payment system that currently powers all money transfers for our customers. Improved testing infrastructure. Currently leading team of developers focused on UK market.

Senior Software Engineer at Blueberry Consultants Ltd, Birmingham

March 2014 — February 2018

Helped the company transition to SPA-style web approach, using Angular framework and Typescript on the frontend plus .NET platform and C# language on the backend with Amazon Web Services platform as cloud provider. Led several small teams of full stack developers while creating SPA-style web systems and management portals. Also used experience with Angular to create cross-platform mobile application based on Ionic framework for an UK Canal&River Trust.

Senior Software Engineer at Pingoscope

August 2011 — March 2014

Development of main code base for front-end and backend in C#/ASP.NET/ Javascript. Development of web-subsystem of backend using Node.js. Migrating database from MySQL to PostgreSQL. Creating structure of main database. Adminstrating servers: Debian, Ubuntu and Windows Server. Work on development of RESTful API.

Software Engineer at Zero Assumption Recovery

October 2008 — August 2011

Development of auxiliary tools. Working with SQL Server databases. Created and maintained online error reporting system.

🎓 Education

Master's degree, Southern Federal University

2004 — 2009

Nanotechnology in Electronics
